The Worksheets

Worksheet 1: The Runway (chapter three)

A. What your household has. Cash, deposits, liquid funds, holdings you would actually sell. Not the house you live in. Not retirement money locked away, such as EPF, PPF or NPS. Not unvested shares. Take off likely tax and selling costs, and leave out money set aside for other goals, including an emergency reserve you do not want to touch for this decision.

A = ₹ _____

B. What your household spends each month. Every EMI. School. Household. Help. Transport. Insurance divided by twelve. Anything yearly divided by twelve. Support for parents and other family obligations.

B = ₹ _____

A ÷ B = _____ months.

Then the second version. Your fixed floor: the part of B you could not remove within ninety days without breaking something.

Floor = ₹ _____, which is _____ % of B.

If income will continue: shortfall = B minus reliable continuing take-home income, including any change in care or work costs. Household Runway = A ÷ shortfall = _____ months. If the shortfall is zero or negative, write "no current drawdown." Test either income stopping and then both.

Can either income, on its own, cover the floor? Yes / No

Worksheet 2: The Ladder Audit (chapter six)

Take last month. Sort your visible output into two columns. Only what left your desk. Being in the room does not count.

Doing (levels 1 to 3): knowing, delivering, supervising. _____ %

Deciding (levels 4 to 6): choosing what mattered, aligning people who do not report to you, carrying the call. _____ %

Then one question, often more revealing than the percentages: in the last three months, how many meaningful conversations did I have with people outside my reporting line who did not need anything from me at the time? _____

Worksheet 3: The Concentration Map (chapter twelve)

Score each line from one to ten: one means well spread out, ten means everything is in one place. It is a rough self-check, so trust your gut.

Employer, income _____

Employer, savings held in its stock _____

Industry _____

Skill: how few employers would pay for what you do (fewer employers, higher score) _____

Network, how much of it comes from one or two firms _____

Household: second income, whether it is in the same sector, and how quickly a partner who is not earning could start again _____

Then the only question that matters: if this went wrong, which of these move at the same time, for the same reason?

Worksheet 4: The Number (chapter sixteen)

Not one number. Four.

Emergency: a reserve you keep only for shocks, about three to six months of your fixed floor. ₹ _____

Choice: fifty months of full monthly spending. ₹ _____

Baseline: about thirty times your yearly fixed floor. Check this against inflation, tax and how long it needs to last. ₹ _____

Full: about thirty times your full yearly spending, checked the same way. ₹ _____

Then the sentence. Which one do you most want to be able to say, and which number releases it?

“_____”
